

LEGENDA

- Qa Aluvião: depósitos de argila, areia e cascalho
- KTB Rochas basálticas de dique
- p6gr Apligrafito hololeucocrático, homôfano a incipientemente foliado nas bordas
- p6vrm Unidade Rio Negro: migmatitos predominantemente estratômicos com paleossoma de biotita-antibiotita gnaiss e neossoma de rocha granítica de fina a média, esporadicamente pegmatoidal. Assinalam-se zonas com granitidade sarorogênica (p6gr).
- p6gsd Plutonito foliado, em corpos circunscritos, cataclásicos, de composição granodiorítica a granítica, com termos xenodioríticos e quartzos sieníticos, assinalam-se zonas com anditos migmatizados (p6gsd).
- p6hso p6bsoc Batólito Serra dos Órgãos: plutonito foliado, primorogênico, de composição granítica a granodiorítica, médios e grosseiros com biotita-antibiotita (p6hso). Zona com macoma estrutura cataclásica e feldspatização irregular e incipiente a assinalada (p6bsoc).
- p6y Rocha ultramáfica serpentinizada

Unidade Itacora: biotita gnaiss, amphibio-biotita gnaiss (a), gnaiss granatíferos (a) com transição para termos xistosos, rochas com trama porfoliada comum, de cor acinzentada (gn), com faixas discretas a finamente migmatizadas (m). Migmatitos predominantemente estratômicos (m) com paleossoma de biotita gnaiss e amphibio-biotita gnaiss e neossoma granítico de folio fino a médio, termos finamente granatíferos (a), ou amphibio-biotita (a) são assinalados. Corpos boudinados de amphibio-biotita gnaiss são frequentes. Gnaiss xistosos com intercalações de quartzito (qt) e quartzitos (qt). Mármore dolomítico intercalado em rochas gnaissicas e quartzíticas (ma). Gnaiss xistosos migmatizados (m). Milonito gnaissico (m). A unidade é injetada por granito cinza-filoniano (f).

- Unidade São José de Ubatuba: granulitos porfíricos e quartzito-feldspáticos
- Limite de formação superficial: Rumo horizontalizado de eixo de dobra similar
- Contato observado ou inferido com segurança; traço curto quando encoberto: Rumo e caimento de eixo de dobra paralela
- Contato transicional: Rumo horizontalizado de eixo de dobra paralela
- Falha reversa, traço no bloco do teto traço curto quando encoberto: Orientação linear de porfoliados de feldspato (p); porfoliados de feldspato (pf); biotita (b).
- Falha verticalizada, tracejada quando encoberto: Orientação linear horizontalizada de porfoliados de feldspato
- Zona cataclásica: Rumo e caimento de eixo maior de agregados quartzito-feldspáticos
- Direção e mergulho de foliação metamórfica: Rumo horizontalizado de eixo maior de agregados quartzito-feldspáticos (f) de estilólitos (rochas)
- Direção de foliação metamórfica vertical: Estrutura antiforme
- Direção e mergulho de laminação e de bandamento: Estrutura sinforme
- Direção de laminação e de bandamento vertical: Estrutura sinforme
- Direção e mergulho de foliação cataclásica: Ocorrências raras
- Direção de foliação cataclásica vertical: re - Rocha calcossilicática; gr - Granito hololeucocrático; at - Quartzito; ex - Charnockito; ma - Microgabro; ri - Restos de teto; kz - Gnaiss kinzípicos migmatizados; ds - Diabásio; bs - Blastomylonito; gt - Granulito; me - Mármore

Jazidas em atividade (x) ou paralizadas (x)

- arg - Argila
- ma - Mármore
- sq - Sabeira de quartzo
- pgr - Pedreira em rocha gnaissada
- ar - Areia
